Test **JS** Summit

# Intro To

JS Functional Testing  
at Scale

# Nikolay Advolodkin

Sr Solutions Architect @saucelabs

[@nikolay\\_a00](https://twitter.com/nikolay_a00) 

# Christian Bromann

Open Source Program Office @saucelabs

 [@christian-bromann](https://github.com/christian-bromann)

 [@bromann](https://twitter.com/bromann)

# Agenda

1. **Introduction**  
Small presentation on browser automation
2. **Test Suite Setup**  
Setup of your test suite with WebdriverIO
3. **Reporters and Services**  
Add reporters and services to your test suite
4. **Network Mocking**  
Simplify your tests by mocking network responses
5. **CI/CD Integration**  
Run your setup in CI/CD and scale it up with Sauce Labs
6. **Visual + Performance**  
Add more test flavors with visual e2e as well as performance tests

# WHAT HAPPENED PREVIOUSLY...

# Types of Tools

# AUTOMATION STRATEGIES

Cypress.io

Through JS +  
browser APIs

Puppeteer

Through browser APIs

Selenium

Through the WebDriver  
protocol

Testcafe

Through JavaScript  
APIs

Playwright

Through custom /  
modified browser APIs

WebdriverIO

Through WebDriver &  
browser APIs

# WAYS TO AUTOMATE A BROWSER

## JavaScript APIs

---

- 1st generation of automating (initially used by Selenium in 2004)
- Provides full control of the execution environment
- Automation commands are mostly emulated
- Comes with limitations, e.g. no switching windows or cross origin iFrame support

## Browser APIs

---

- 2nd generation of automating browsers
- Available in all browser engines (Chromium/Gecko and WebKit)
- Accessible only in Chromium and Firefox
- Also used for debugging purposes (e.g. Chrome DevTools)

## WebDriver Protocol

---

- 3rd generation of automating browsers
- Official Web Standard developed at W3C in a common effort by all browser vendors
- Thoroughly tested as part of the web platform test suite
- Limited capabilities - originally designed to automate from the user POV

# Sauce Testrunner Toolkit

Sauce Testrunner Toolkit is a solution that expands Sauce Labs capabilities to support scalability and insights new test automation frameworks.

Test automation plans can be used across an expanded number of frameworks including: Cypress, Playwright, TestCafe.

It simplifies setting up and maintaining test environments, offers parallelization at scale and unifies test results for better analysis and debugging.

<https://saucelabs.com/platform/sauce-testrunner-toolkit>

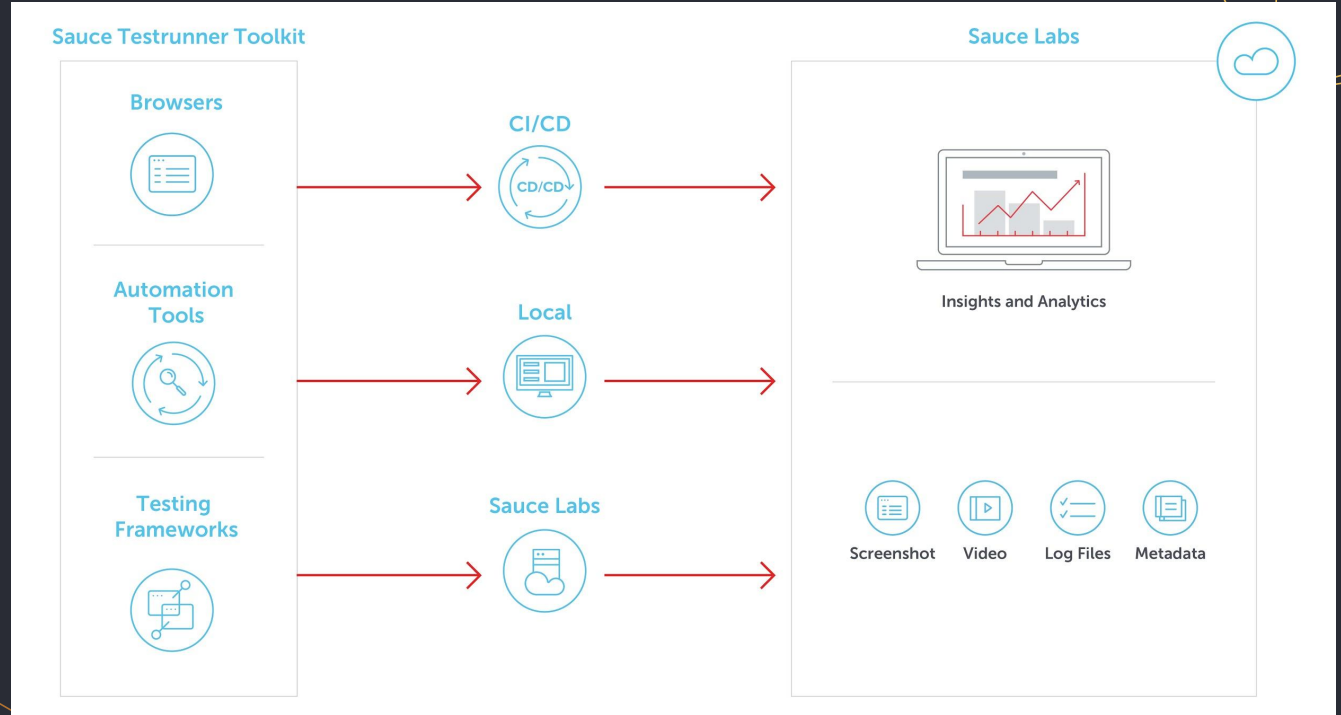

# Sauce Testrunner Toolkit (Beta)

Simplify test maintenance with pre-configured containers or VMs

Run tests in parallel in CI/CD or on Sauce Cloud to speed test execution.

Report test data to Sauce Labs for debugging, analysis, and insights.

For further instructions

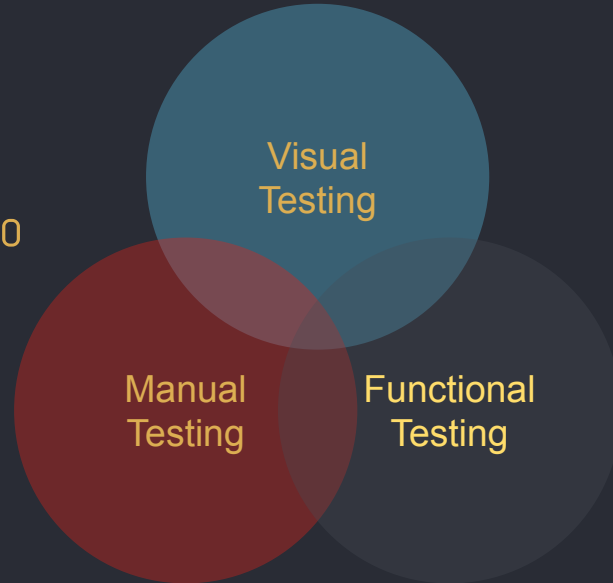

# Visual E2E Testing

Anyone know what visual testing is?

# Visual E2E Testing

Visual testing is how you ensure your app appears to the user as you intended.

# Visual E2E Testing

**Automatically detect visual regressions across your application UI and increase test coverage by performing both visual and functional testing in the same test run.**

## **Programmatic comparisons**

Leverage DOM snapshots to inform page comparisons, allowing for more accuracy in identifying & troubleshooting true regressions, plus helping to eliminate false positives.

## **Eliminate UI bugs**

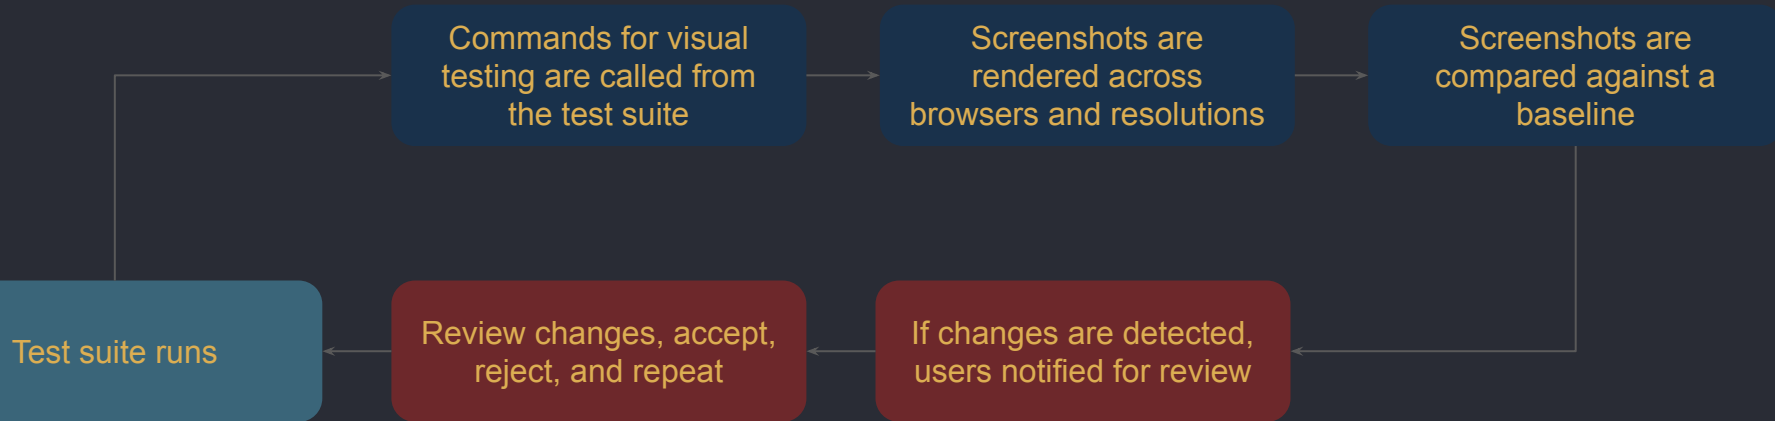

Harness the power of automation to test UIs across different browsers and resolutions. Spot UI inconsistencies and fix them early in the development cycle.

## **Leverage existing tests**

Maximize the investment in test automation and increase test coverage by performing both visual and functional testing in the same test run.

# Visual E2E Flow

Let's  
Get  
Back To  
Code

# Your Feedback
